

Global Dry Toilet Club of Finland

Dry Toilet Maintenance and Output Management - A Short Guide for Finland

Aim of the project

To produce a short and easy to read guide for Finnish dry toilet users (in Finnish and Swedish).

The Guide considers Finnish traditions on using dry toilets as well as latest legislation concerning dry sanitation. As traditions and legislation varies even in EU, the Guide cannot be used directly in other countries.

Contents (only 12 pages!)

- What is a dry toilet? - Dry Toilet Vocabulary
- Legislation concerning Dry Toilets in Finland
- Things to consider before purchasing
- Dry toilet cleaning, bulking materials, other additives
- Composting of the solids and usage of the compost
- Usage of the urine
- Excess liquid usage
- Chemical toilets
- Most common problems: flies, odors, microbes, output management outside your own garden

Dry Toilet promotion in Spain, Estonia and Latvia

The demand for dry toilets is urgent in many EU countries:

- there is no water to be wasted,
- water tables are high,
- there is no water purification plants,
- water bodies are eutrophicated
- nutrients are needed for cultivation
- etc.

→ need for more information on modern dry sanitation!

1. Demonstration sites

Where people can see and smell the toilets

2. Comprehensive booklets

Including basics of dry sanitation
